

# Tracking Acute Traumatic Work-Related Deaths in Michigan

Additional Information Available at: [www.oem.msu.edu](http://www.oem.msu.edu)

## Summary Statistics

**The rate and the number of acute traumatic work-related (WR) deaths in Michigan ticked upward in 2016.** Rates of death per 100,000 workers are shown by the **blue line** and the number of deaths by the **green columns**. Construction (28, 20.6%) had the largest number of work-related deaths and Agriculture the highest risk of death (24.2 deaths/100,000 workers). Individuals who died were most likely to be men (88.2%) and Caucasian (78.3%). The average age was 48.7 years and ranged from ages 14 to 86 (Both in Agriculture). Hispanic/Latino workers had the highest fatality rate (5.1 deaths per 100,000 individuals).

### Industry Sector, Michigan, 2015

A male pipe layer in his 40s died in a trench wall collapse installing drain tile pipe. The trench had a 1½-foot seam of wet sand at its base and then 5 feet of wet clay. Falling clay forced a shovel to strike his right side, pinning him against the opposite side of the excavation.

## Background

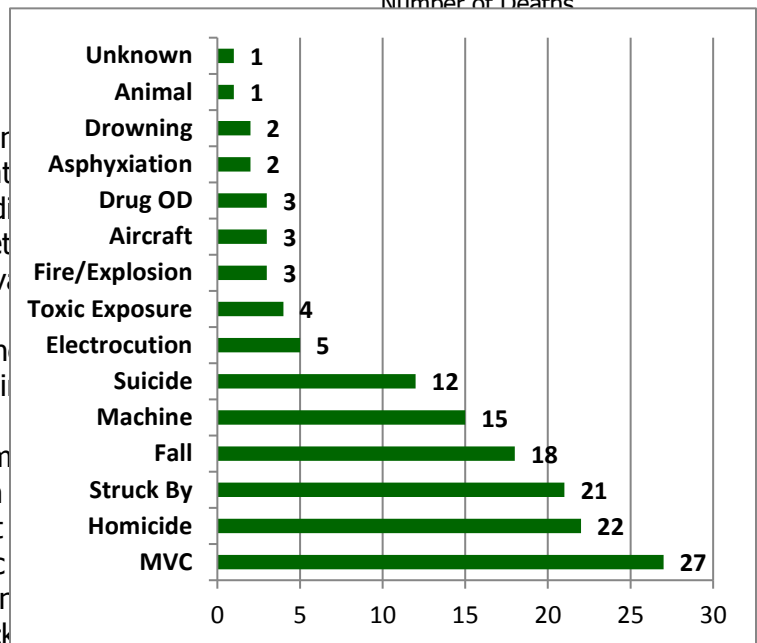

The Michigan Fatality Assessment and Control Evaluation (MIFACE) research program began on January 1, 2001. The goals are to: 1) identify types of industries and work situations where workers are dying from acute traumatic incidents, 2) identify the underlying cause(s) of the fatality and 3) formulate and disseminate prevention strategies. MIFACE is funded under a cooperative agreement with the National Institute for Occupational Safety and Health (NIOSH). A **traumatic injury** is any unintentional or intentional wound or damage to the body resulting from acute exposure to energy or from the absence of such essentials as heat or oxygen caused by a specific event, incident, or series of events within a single workday or shift. **Work** is defined as legal duties, activities, or tasks that produce a product as a result and that are done in exchange for money, goods, services, profit, or benefit. Volunteers who are exposed to the same work hazards and perform the same duties or functions as paid employees are included in the MIFACE program.

## 2015 Results

Number of deaths

### Cause of Death, Michigan, 2015

Number of Deaths

## Work-Related Fatality Narratives

- Of the 25 individuals who were 65+ years of age (12 in agriculture, 13 in other industries).
- Homicides/Suicides: Guns were involved in 80% of all homicides and 58% of all suicides.
- A male farmer in his 80s died when he was pinned by a tractor loader tractor. The tractor came to a washout at the end of the driveway.
- A male farmer/greenhouse co-owner in his 60s died by a tractor/forklift fall approximately seven feet from the top of a greenhouse.
- Of the 29 motor vehicle (MVC) related deaths, 8 were in Transportation and 5 were in Construction. MVC accounted for 3 of 7 Public Administration deaths.
- A male self-employed roofer in his 40s died while sitting in his work van. A day prior to the incident, he had placed the bucket inside the van. The van was struck by a truck in a residential area.
- A male warehouse manager in his 50s died from a fall. 8 falls of 10 feet or less (5 falls were 10 feet or less).
- A female journeyman maintenance technician in her 40s died from a fall. 2 falls were 11-20 feet, and 5 falls were 21-40 feet. The height of three falls is unknown.
- A male construction laborer in his 30s died when he was struck by a machine while transporting three coworkers back to a work site.
