Written Silica Exposure Control Plan - Sample

Company: ___________________________ Date: ________________

Person Completing the Plan, Title: ________________________________

Competent Person: ______________________________________________

Job site/location: _______________________________________________

Description of Task: _____________________________________________

________________________________________________________________________

(Routine task, new task, Indoors/outdoors, task found on Table 1?)

Engineering Controls: _____________________________________________

________________________________________________________________________

Any deviation from Table 1 = air monitoring is required. Engineering controls must be used at all times!
(Wet methods, continuous water feed, local exhaust ventilation w/ HEPA filters, commercially available shrouds, commercial dust collection system, cyclone pre-separator/filter cleaning system, surfactant used, and ventilation ≥ 25 cfm/inch of wheel diameter, enclosed cab w/ fresh climate controlled air to operator, employees outside of cabs applying water/dust suppressants, equipment maintained to minimize dust emissions.)

Work Practices: _________________________________________________

________________________________________________________________________

(Maintain equipment functionality – cleaned/spare filters, hoses to start; good connections; hoses with no holes, kinks, permanent bends, crushed; power source available; water source available, ensure ventilation is ≥ 25 cfm/inch of wheel diameter; water/exhaust ventilation lines safe from damage; shrouds/cowls fit correctly and not damaged; follow Manufacturer’s instruction for filter cleaning/change out.)

Respiratory protection: ___________________________________________

________________________________________________________________________

(Use respirator with APF = 10 the entire time the task is being performed – See Table 1)

See Part 451 – Respiratory Protection rule for information on selection, training and fit testing requirements, and proper use instruction for respirators (i.e., no facial hair interfering with the respirator sealing surface).
Housekeeping: ________________________________________________________________

(Dust containing silica on work surfaces/equipment must be cleaned up using wet methods of HEPA equipped
vacuum, no use of compressed air or dry sweeping for removing dust and debris containing silica, dispose of
used vacuum bags in a closed sealed container).

Procedures Used to Restrict Access to Work Area (Construction = optional, GI = required if
exposures exceed the permissible exposure limit, PEL): ________________________________

__________________________________________________

__________________________________________________

__________________________________________________

(Signage, barricades, enclosures, spotters, work when area is cleared of other contractors to reduce risk of
exposure.)

Objective data use (Optional) – Yes or NO

Data Source: ________________________________________________________________

__________________________________________________

Data conditions from the source exactly matches the work conditions? Yes or No

(Same conditions, equipment, process, controls, material silica %, environmental.)

Review and update this plan annually.

Keep a copy of this plan at the jobsite.

Provide this plan of action to the General Contractor.

Review this plan with all involved employees.
