Hearing Loss
Can Lead to:

- Constant ringing in the ears
- Partial to full deafness
- Difficulty hearing conversations on radio
- Difficulty hearing conversations in groups
- Need to use hearing aids
- Increased stress or fatigue
- Reduced productivity and safety
- Social isolation and depression

The recommended response to stop hearing loss is to fix the noise source. If this is not practical, then you need to use ear plugs or ear muffs whenever noise is 85 decibels or more. A handy rule of thumb is to think about this as the level when you have to shout to be heard by someone a few feet away.

Hearing Loss
is one of the easiest hazards to protect against

You can begin to save your hearing today even if you have experienced some hearing loss by using:

**Formable Foam Plugs**

These are compressed in the fingers and then they gently expand when inserted in the ear.

**Earmuffs**

These hard plastic earcups are lined with sound absorbing foam or oil filled bags with an adjustable head band.

Plugs and Muffs are:

- Comfortable
- Simple
- Inexpensive
- Convenient
- Effective

It’s never too late to start!
The National Institute for Occupational Safety and Health (NIOSH) recommends the maximum noise level should be limited to **85 dB(A)** for 8 hours of exposure. This is the same level at which the Occupational Safety and Health Administration (OSHA) requires a hearing conservation program.

**Hearing Loss is Permanent and Irreversible!**

Hearing gets worse as you get older, but if you protect your hearing, you can delay hearing impairment until at least your 60’s. By the age of 25, lawncare workers who do not protect their hearing will have the hearing of a 60 year old who has had a quiet job or protected their hearing.

**Become Aware of the Risks:**

Hearing loss can occur from a single, loud, explosive sound or from prolonged daily exposure to high levels of noise.

After you leave work, if your ears are ringing or sounds seem dull or flat, then you were exposed to damaging levels of noise.

Hearing aids will not completely reverse hearing loss and will not stop the constant ringing in the ears caused by hearing loss.
